

● = refereed venue (CoRL, IEEE TETCI); others are preprints

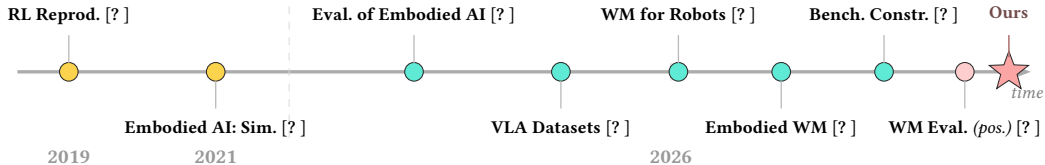

Fig. 1. The closest benchmark/evaluation surveys as a timeline. Two predate the recent wave, an IEEE TETCI survey of embodied-AI simulators and tasks [? ] and a CoRL survey of real-robot RL reproducibility [? ] (amber = refereed venue); the rest are 2026 preprints on embodied evaluation, VLA data, and world models. None organises the robot-evaluation landscape by evaluation-mode  $\times$  capability  $\times$  model-family; the sole work reaching the advantage-of-prediction axis is a *position* paper [? ]. **Ours** (★) fills that cell; per-axis coverage is in Table ??.
