

Confidence estimated after the fact, and confidence trained into the model

Estimated after the fact: read-off, post-hoc maps, prompts, extra inference (S0 to S3)

Trained into the model: a calibration term in the training loss or reward (S4)

Fig. 1. **Confidence estimated after the fact, and confidence trained into the model.** Panels are drawn from Figures 8 and 9 under the same licence rule: one per stage for S0, S1, S2, S3, and one per training family for S4 (T1, T3, T4; T2, T5 not shown). Each label links to the paper; Table E1 gives the figure, page and licence.
